Herbal Treatment for Dengue hemorrhagic fever

Bearer Indigenous Medical practitioner Dr Laxman J Embuldeniya has developed a herbal medicine apparently very effective for treating all conditions of Dengue hemorrhagic fever and has demonstrated its efficacy successfully on several patients at Kalutara and Matale.

He has presented the results of his investigations to HE The President who has requested Hon Minister to provide suitable facilities to validate and demonstrate the efficacy of the herbal treatment option in comparison to ongoing allopathic procedures.

I would appreciate if you would convene an expert committee to assess the efficacy of the above treatment option.

Your early attention in this regard is appreciated.
